Tubestock for the Goulburn area

The following is a list of native plant species that Wariapendi usually has available in tubes.

This information is intended as a guide only.

While much effort has been spent in the research of plants, soil types, microclimates etc it is difficult to be totally accurate in species selection for a specific site.

It has been found that these species do well in the specified localities but it is dependent upon soil type, frost, aspect, elevation etc.
